**warmer**

- excellent thermal insulation
- U value of 1.2W/m<sup>2</sup>K
- minimal heat loss

# heating bills rising?

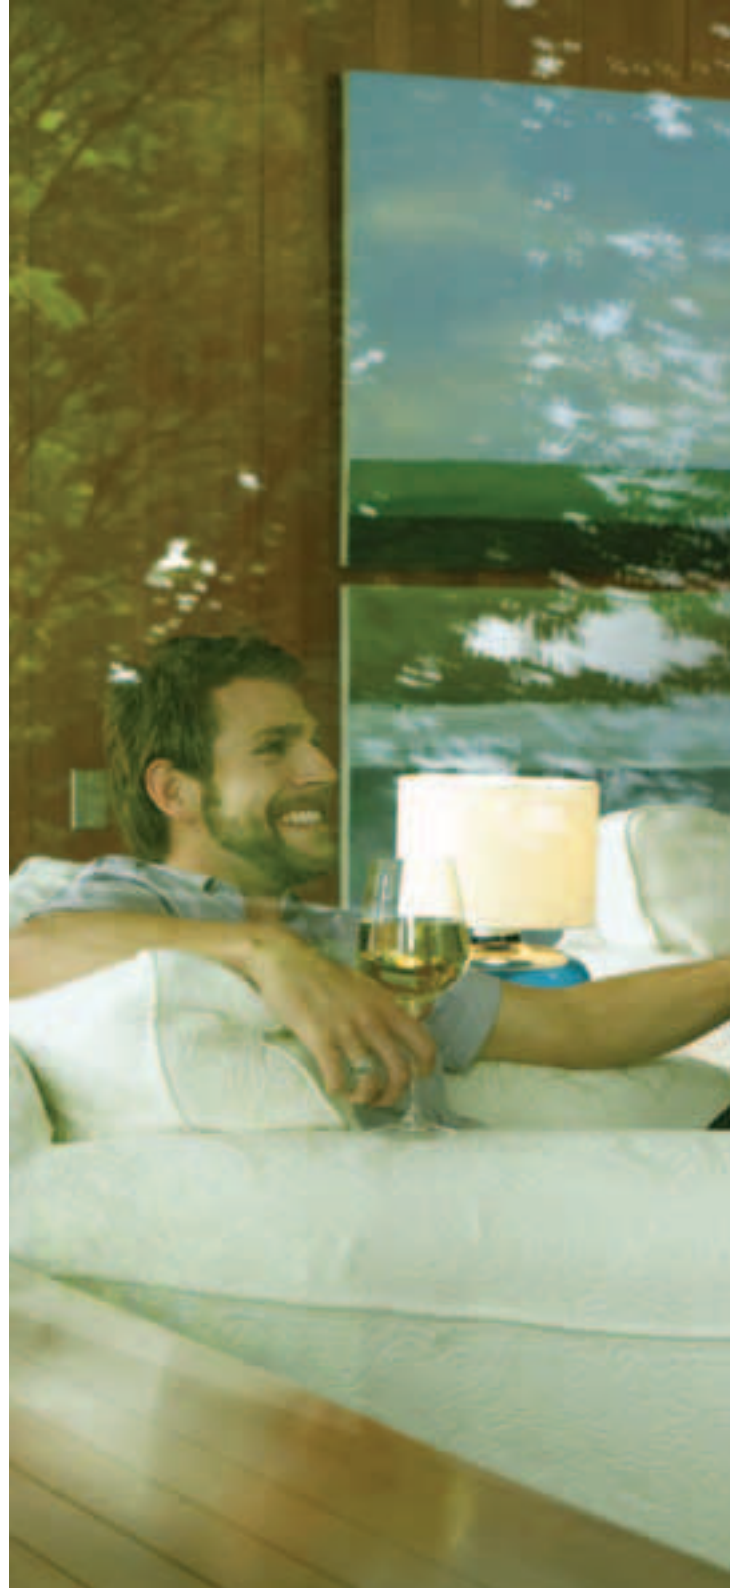

In the average home, 80% of the energy used is for heating, but much of this heat just disappears through poorly insulated roofs, walls, windows and doors.

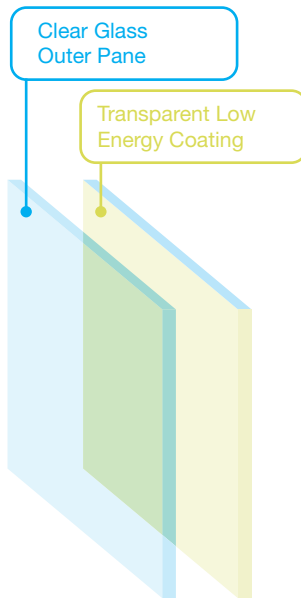

While many homes already have double glazing, a new generation of low-energy glass can dramatically reduce the amount of heat lost through the glazing

icosave energy saving glass improves insulation by 136% compared to conventional double glazing.

Ask your local window company to install icosave energy saving glass today.

## improve insulation

icosave is a clear glass unit. Even though it looks just like ordinary glass, it isn't. It reflects heat back into your home, while letting in lots of natural daylight and free heat from the sun. So you save money on heating bills while enjoying a more comfortable home.

- icosave consists of two panes of clear glass
- the inner pane has a transparent low-energy coating
- icosave can be configured with float glass or toughened or laminated safety glass

Heat Reflecting Glass

Argon Gas Cavity

1.2 W/m<sup>2</sup>K U Value

Privacy Glass Option

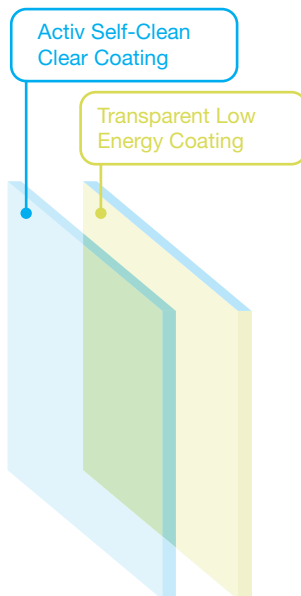

Decorative Glass Option

Toughened Glass Option

Laminated Glass Option

As well as saving on heating costs, you can save time, energy and money with icosave ACTIV. You get not only the practical benefits of less cleaning and a warmer home, but also cleaner, better looking windows all year round.

- icosave activ consists of two panes of clear glass
- the inner pane has a transparent low-energy coating
- the outer pane has a transparent self-cleaning coating
- icosave activ can be configured with float or toughened glass
